## 1. Introduction

Introduction: define what is Quality? What is Safety? What is the method we will use in this presentation? i will Speak about the STEEEP , and the description of each part of alone plus the Quality Principle that we describe the ESR from them.

## 2. Material and Methods

Being conducted in 2017, this qualitative study was the first of its type in KSA. Data were collected through in-depth semi-structured interviews with 45 Multidisciplinary Caregivers working in various other departments & Hospitals across the Kingdom. The participants were selected using a Random sampling method. Interviews were transcribed and analyzed following a qualitative content analysis approach. Written text was coded and later themes were extracted from the data. Ethical considerations: The study was conducted with proper guidelines from multidisciplinary free informed consent and approved by Ethics Committee of Enaya Hospital/ Enaya Medical group.

## 3. Results

Based on the analyzed data, we found that distribution for the multidisciplinary over a different committees over 1 year and 2 month has improved the outcome of the achievement of the ESR by 38% as a results from the CPAHI Rounds on july 2017

## 4. Conclusions

The distribution for the multidisciplinary over all hospital committees can improve the percentage of ESR significantly when being changed in yearly basis by taking the consideration of the active work for this Committees and number of members
